講題：The weighted Shapley value: potentializability and equivalent relations

時間：100年4月22日(星期五)15:10-16:50

摘要

Similar to the Shapley value, we characterize the family of all solutions that admit a potential and, as a main result, it is shown that each of these solutions can be obtained by applying the weighted Shapley value to an appropriately modified game. Based on an equivalent theorem, several axiomatizations of the weighted Shapley value are proposed.
